CUTTING KNIFE PROTECTION & STORAGE
z-knife keeping system

z-knife keeping system

Complete solution for protection and storage of cutting knives and accessories – including safe transportation packaging

Cutting knives are delicate and expensive

For every knife there is a specific rigid foam shadow board with a customized machined knife contour and explicit labelling – if necessary together with its holder. The knife is stored in this protective packaging when not in use or when being sent for regrinding.

Transfer to regrinding in safe transport box

Standardized and closable plastic box holds the knife in its rigid foam shadow board. Thus the cutting knife is ideally protected during transport – without any additional packaging.

Double door cupboard

Every rigid foam shadow board for each knife has its assigned place in the cupboard. Keeping order and having an overview is easy. See at one glance which knife is in use in the machine, which knives wait for their usage and which knives have been sent away for regrinding. Saw blades, further accessories and empty transport boxes also find their place in the cupboard.

Dimensions

Rigid foam shadow board / protective packaging according to knife size

Transport box (plastic box with lid) 400 x 300 x 80 (or 120) mm

Double door cupboard 1000 x 1950 x 500 mm
